Barber S2-86® Radial Adapter: Performance update

Building M-976 ready new freight cars? Considering upgrading your fleet to 286 GRL? Choose the Barber S2-86® Radial Adapter to maximize your truck performance.

Over the past four years, the Barber S2-86® Radial Adapter has been specified on thousands of freight cars for 286 GRL service. Along with excellent curving performance and the lowest rolling resistance of any semi radial truck adapter, the Barber S2-86® Radial Adapter offers superior durability and reliability (based upon lab and field results). Yet the entire unit is self-contained and directly replaces standard bearing adapters in-kind – no special side frame is required.

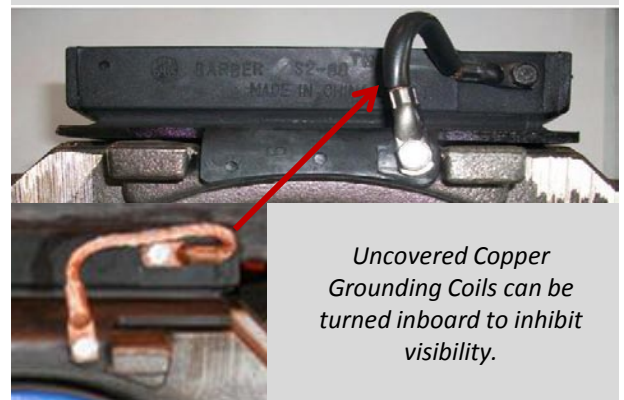

The Barber S2-86® Radial Adapter Assembly shown above (Item# 6374) is available for use on S-2-HD, S-2-HD-9C, and S-2-E Barber stabilized Trucks. The 6374 Assembly includes our 100-Ton Bearing Adapter (Item# 6366) and Shear Pad (Item# 6367).

Durability You Can Count On!

The Barber S2-86® Radial Adapter and Shear Pad shown below have accumulated 120,000 miles in coal service and are in 'like new' condition. There is no measurable wear or deterioration of the rubber.

To help avert theft, the Copper Grounding Coil is now covered with black plastic.

Uncovered Copper Grounding Coils can be turned inboard to inhibit visibility.

Contact your Wabtec Sales Manager today to learn how the Barber S-286® Radial Adapter can...

Improve your truck performance.
